

Synergy Heat

Smart Hot Water Control

Key Features

Improves hot water efficiency and reduces operating costs with "Just in Time" heat optimisation

Automatically shifts water heating to low-cost power periods

Monitoring of water heating operations to help optimise procedures.

Maintenance insights to help reduce downtime

Reduction in carbon emissions

Synergy Heat

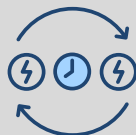

Smart Hot Water Control

Product Overview

Automating the water heating process reduces energy consumption and increases efficiency by ensuring that the water is only heated when required. This reduces the amount of time hot water is sitting and using power to maintain the temperature.

Synergy Heat is programmed with your power rates and automatically shifts the heating schedule to maximise heating in cheaper power periods.

Shifting heating to periods with more renewable energy can assist in reducing carbon emissions and can help meet emissions targets.
